

HORIZONTAL DRILLING MACHINE

DESCRIPTION

The Horizontal Drilling Machine efficient hole drilling for a wide range of glass processing applications. Equipped with both upper and lower drilling heads, it produces clean, precise holes while minimizing chipping and ensuring consistent quality.

Designed for ease of operation, the machine features pneumatic glass clamping for secure positioning, adjustable drilling speed and depth, and automatic lower drill movement for improved efficiency. The pneumatically controlled worktable moves vertically to accommodate various glass thicknesses, while the automatic feeding system supports continuous, high-volume production.

HIGHLIGHTS

- ✓ Fast, Accurate, and Stable Drilling
- ✓ Compact and Space Saving Design
- ✓ Robust Structural Design
- ✓ Easy Installation

SPECIFICATIONS

-  Ø4-Ø160 mm
HOLE DIAMETER
-  Low—Mid
VOLUME
-  3-19 mm
GLASS THICKNESS
-  33.5" (850 mm)
TABLE HEIGHT

TECHNICAL SPECIFICATIONS

	W	L	H
CZJ	98.43" (2500 mm)	84.65" (2150 mm)	68.90" (1750 mm)
